

# MAUS Health & Safety System

**The Complete Package  
... Includes MAUS Health and Safety Planner and  
MAUS Business Dashboard**

## How does Health and Safety system work?

Health and Safety System consists of an Offline module (Health and Safety Planner) and an Online module (Business Dashboard). Together they form a complete system for health and safety compliance.

Here's how it works:

### Create the Documentation ... offline module Health and Safety Planner

- Create documentation quickly in your company name.
- Communicate the documentation to your staff and keep a written record of their compliance automatically.
- Maintain a controlled document, with automatic revision numbering and history audit trail for individual policies.

### Implement your Plan ... online module MAUS Dashboard

- Publish your documentation online with easy access for any employee, contractor etc.
- Speed up work flow with 'interactive forms'. Your forms are stored online ready to be filled on the spot, all with a digital paper trail.
- Log Health and Safety incidents and launch investigative/corrective actions, which can be assigned to employees' individual staff planners.

#### What does the system offer you?

- Every tool you'll need on your way towards compliance with WHS legislation.
- A place online to store your documentation.
- All the WHS templates you'll need.
- System for streamlining your incident reporting of the system.
- Incident management, revision control, templates, SWMS, risk assessments... Everything!
